

HPMS MANAGER

With PMG's **HPMS Manager**, transportation agencies can take advantage of an easy to use set of tools to correlate and validate data prior to upload to the FHWA's HPMS site. The HPMS submittal process is a time-consuming effort involving data cleanup, formatting, upload, validation, and rework; at the same time competing with other agencies for FHWA resources. Fully compatible with Esri's Roads and Highways, **HPMS Manager** will allow the HPMS Coordinator to execute the same quality control validations run by FHWA within the DOT environment. This will allow the user to cleanse data prior to upload, providing better validation results, and saving the most important resource – time. **HPMS Manager** offers the following advantages:

- Designed to work in conjunction with Esri's Roads and Highways (R&H)
- User can easily define source data mapping for each HPMS item
- Full suite of validations based on FHWA specifications
- Ability to edit validation rules
- Source data residing in versioned R&H geodatabase can be directly edited from within application
- Submittal file creation
- Advanced, ad-hoc reporting capability
- Certified Mileage report creation
