

TDM

PMG's Traffic Data Manager (**TDM**), a web-based, geospatial application enables DOT agencies to create, manage, analyze and report Annual Average Daily Traffic (AADT) and other critical traffic data. AADT is one of the most highly sought after and useful pieces of information throughout a DOT. Due to fiscal constraints, the importance of AADT to both transportation agencies and federal authorities will only continue to increase. Access to this information must be fast and accurate. **TDM** is a complete and comprehensive system providing:

- Creation of the monthly report submittal for FHWA
- Integration with Esri's Roads & Highways
- Management of both permanent and portable sites
- Scheduling assistance for collecting data
- An import mechanism for hourly data
- Creation of year-end AADT values
- Creation and validation of HPMS required traffic data items
- Creation of HPMS traffic files needed for the yearly submittal
- Ad hoc query and reporting tools

About PMG

PMG is a transportation software company offering a comprehensive technology stack for DOTs backed by a full complement of consulting services and world class customer support. We are focused on helping DOTs manage assets, project budgets and project life cycles using the latest geospatial technologies.

Manage traffic data easily and efficiently
